

DataSensei Updates 13 — Change Report

Certificate of Completion and Gradebook (the Combined Certificate Builder and Gradebook Requirements), together with Additional Requirements Parts 2 and 3. Prepared 1 October 2026 against your codebase with Updates 12 and the opened_at fix applied. This ZIP replaces the earlier Updates 13 ZIP, which you have not applied: use this one only.

In short

- **Certificate Builder.** “Choose a Module” is gone. A Certificate of Completion belongs to one of the instructor's classes and stands for all the work assigned to it in the semester. The instructor first chooses one of the five layouts, then fills in the details while a live preview updates; the class supplies the course information (course name and code, section, semester) through placeholders. At the end of the semester the instructor reviews every student's completion and grades, selects the eligible students and issues the certificate.
- **Eligibility.** A student can receive it only when every module, activity (challenge given to the class) and assessment assigned to the class is complete; the server checks each selected student again when the certificate is issued, and each student receives it once. Nothing is issued automatically for a class.
- **Instructor Gradebook.** Students in rows, the class's assessments in columns, a Final grade column, an Average / Total row, a Completion column, and a page per student with every attempt, completion and certificate, to review before issuing.
- **Student Gradebook.** Assessment, type, score, percentage, status, due date, attempts, submission date and feedback, with an Overall grade row and the student's completion of the class.
- **Everything from Parts 2 and 3** is included: five layouts on screen and as PDF, My Certificates with View and Download PDF, public verification by certificate ID, admin settings (issuer, logo, signatory, layouts, core requirement set), revoke and reissue with audit, and Dark / Light mode.

Combined requirements: what was asked, and what was done

Requirement	Delivered
1.1 Remove “Choose a Module”; the certificate is not tied to one module; a simple course/class placeholder instead.	Done. The builder has no module field (a posted module is ignored). Step 2 “Course / class” shows the class's course name, course code, section and semester from the class record, with the placeholders [Course Name], [Course Code], [Section] and [Semester].
1.2 Choose one of five layouts first.	Done. Step 1 shows the five layouts; none is preselected for a new certificate, and saving without one is refused beside the field.
1.3 Live preview that updates immediately.	Done. After a layout is chosen the preview appears and redraws about 0.2 s after every change (layout, class, name, title, statement). It is drawn by the server with the same layout code as the PDF, so the preview is exactly what students receive; nothing is saved. An unknown placeholder is flagged under the statement while typing.
1.4 Select eligible students (all required modules, activities and assessments of that class).	Done. “Review students and issue” lists every enrolled student: modules, activities and assessments done, final grade, completion with what is missing, the certificate already held, and a link to their assessment history. Only students who completed everything can be ticked.
1.5 Issue to the selected students; completion of the class for the semester, not of every DataSensei module.	Done. Issued only to selected students the server confirms, once each; recorded in the audit log under the instructor's name and shown to administrators as “issued by”. The certificate names the course and semester.
3 Instructor Gradebook: students x assessments, scores, percentages, status, due dates, submission information, averages, student history; practice separate.	Done, extending the Updates 12 gradebook: Final grade column, Average / Total row (assessment averages and the class average of final grades), Completion column, and a student record page with every attempt, its status, score and date. Only the class's published assessments are grade columns.

Requirement	Delivered
4 Student Gradebook: only the student's own results; type, score, percentage, status, due date, attempts, submission date, feedback, overall grade.	Done, extending the Updates 12 page: all those columns, "View feedback", an Overall grade row (points earned / possible and the overall percentage; In progress or Final) and the student's class completion. Still only the signed-in student; any id in the URL is ignored.
5 Rules: class scope, assessment source, student and instructor scope, practice separation, completion, eligibility, issuance.	Done as listed in the next table.

Gradebook rules and data flow (section 5)

Area	How it works now
Class scope	Every grade belongs to one class; the gradebooks read one class at a time.
Assessment source	The class's published and closed assessments only (drafts never).
Student scope	The student gradebook reads only the signed-in student; a class they are not in answers 404.
Instructor scope	Only the instructor's own classes; a student who is not enrolled in the class answers 404.
Score data	Score and total points, percentage, status, attempts, submission date, due date and feedback, from the saved submissions.
Overall grade	The project's rule (agreed in Updates 12 and used by Class Analytics): the average of the student's graded assessments, each counting equally, using the best graded attempt. Points earned / possible are shown beside it.
Practice separation	Public challenges, personal practice and challenges given to the class are never grade columns. Challenges given to the class count only toward completion, as activities.
Completion	Every item assigned to the class: modules completed, MCQ challenges passed (70%), coding challenges fully solved, assessments turned in and graded (an attempt awaiting a grade or held for an integrity review is not complete yet). The same rules as Class Analytics; no new progress calculation.
Certificate eligibility	Checked on the server when the instructor issues, against those required items.
Certificate issuance	The instructor selects eligible students and issues; each student once; revoked copies are only reissued by an administrator.

Decisions and interpretations

What is "required". Everything the instructor assigned to the class is required: its active class modules, the challenges given to it and its published assessments. Removing an assignment removes it from the requirements. The certificate page lists all of them.

Course placeholder. The course information comes from the class record you already have (class name, subject code, section, term). [Module Name] still works and shows the course name, so statements written for Part 2 keep working.

Part 3, step 4. Part 3 had the instructor select the Python Fundamentals module. The combined requirements remove module selection, so the simulation now uses a class "CS 101 Python Fundamentals" whose title comes from the class record, and certificate names such as "Python Fundamentals Completion Certificate" remain possible.

Draft / Active / Inactive (Part 2). Kept: a certificate is saved as a draft, activated after its preview, and can only be issued while active. Activating issues nothing.

Core certificates. Unchanged: the three Core certificates are still issued automatically after the server-side check; only class certificates are issued by the instructor.

Screens

Rendered by the application from a seeded database, driven in Chromium (login, layout choice, typing, saving, activating, issuing).

New Certificate of Completion

A Certificate of Completion for one of your classes: everything you assigned to it, not one module. Choose a layout, then fill in the details while the preview updates. At the end of the semester you issue it to the students who completed the class.

Step 1. Choose a layout ?

☐ **Academic Classic**
Traditional academic certificate with a centered title and a formal signature area.

☐ **Institutional**
Institution-focused layout with the logo and issuer at the top and a formal completion statement.

☐ **Minimal Professional**
Simple, clean layout with minimal decoration and strong readability.

☐ **Formal Border**
Traditional bordered certificate for completion and achievement awards.

☒ **Modern Academic**
A restrained contemporary academic layout, without gradients or decorative effects.

The five layouts are fixed designs; you only fill in the words. The preview below shows your choice.

Step 2. Course / class

Class

Python Fundamentals, BSDS 1A

Course name [Course Name]

Python Fundamentals

Course code [Course Code]

CS 101

Section [Section]

BSDS 1A

Semester [Semester]

1st Semester 2026-2027

The certificate is for completing this class: every module, activity and assessment you assign to it. It does not stand for one module or for every DataSensei module. The course details come from the class record (edit them under Classes) and reach the certificate through the placeholders shown.

Step 3. Certificate details

Certificate name

Python Fundamentals Completion Certificate

Live preview

With a sample learner, today's date and a sample certificate ID. It changes as you edit; nothing is saved until you press Save.

Certificate Builder (Light): step 1 layout, step 2 course / class from the class record, and the live preview with the text being typed.

DataSensei Updates 13 — Change Report

Page 3

Step 2. Course / class

Class

Python Fundamentals, BSDS 1A

Course name [Course Name]

Python Fundamentals

Course code [Course Code]

CS 101

Section [Section]

BSDS 1A

Semester [Semester]

1st Semester 2026-2027

The certificate is for completing this class: every module, activity and assessment you assign to it. It does not stand for one module or for every DataSensei module. The course details come from the class record (edit them under Classes) and reach the certificate through the placeholders shown.

Step 3. Certificate details

Certificate name

Python Fundamentals Completion Certificate

For example Certificate of Completion, or Python Fundamentals Completion Certificate.

Instructor name

Iris Santos

Instructor title

Data Science Instructor

Always your own name, from your account.

For example Data Science Instructor.

Issuer / institution

Northfield University

Your institution, or the DataSensei issuer set by an administrator.

Certificate statement

This certifies that [Learner Name] has successfully completed [Course Code] [Course Name] ([Semester]), including all required modules, activities and assessments. [Grade]

Not a placeholder: [Grade]. Use one of the placeholders listed below.

Placeholders ? (click one to insert it)

[Learner Name] The learner's name

[Course Name] The class's course name, from the class record

[Course Code] The class's subject code, for example IT 301

[Section] The class section

[Semester] The class term, for example 1st Semester 2026-2027

[Certificate Name] The certificate name above

[Instructor Name] Your name, as the signatory

[Instructor Title] Your title, as entered below

[Issuer/Institution] Your institution, or DataSensei

[Issue Date] The date the certificate is issued

[Certificate ID] The certificate's unique ID

Save draft

Cancel

Live preview

Northfield University

Issued through DataSensei

Certificate

Python Fundamentals Completion Certificate

Awarded to

Sample Learner

This certifies that Sample Learner has successfully completed CS 101 Python Fundamentals (1st Semester 2026-2027), including all required modules, activities and assessments. [Grade]

ISSUED

October 1, 2026

CERTIFICATE ID

DS-CLS-20261001-SAMPLE001

Iris Santos

Data Science Instructor

Verify the certificate at <http://237.58.1.80/237certificates/verify/DS-CLS-20261001-SAMPLE001>

With a sample learner, today's date and a sample certificate ID. It changes as you edit; nothing is saved until you press Save.

Step 3 details (Dark): the signatory is the account, an unknown placeholder is flagged while typing, and the preview follows every change.

☐	Student	Modules	Activities	Assessments graded	Final grade	Completion	Certificate
☐	Ana Villanueva ana.villanueva@test.local Assessment history	2 of 2	2 of 2	2 of 3	77.5%	6 of 7 done ▶ 1 not complete	Not issued
☐	Bea Santiago bea.santiago@test.local Assessment history	2 of 2	0 of 2	3 of 3	87.7%	5 of 7 done ▶ 2 not complete	Not issued
☐	Lea Cruz lea.cruz@test.local Assessment history	2 of 2	2 of 2	3 of 3	89%	Completed	DS-CLS-20261001-NM8L9PHO Oct 1, 2026
☐	Marco Dela Rosa marco.dela.rosa@test.local Assessment history	2 of 2	2 of 2	3 of 3	93.7%	Completed	DS-CLS-20261001-43YTXFVY Oct 1, 2026
☐	Paolo Reyes paulo.reyes@test.local Assessment history	1 of 2	0 of 2	1 of 3	60%	2 of 7 done ▶ 5 not complete	Not issued

Issue certificate to selected students
No student can receive it right now: a student must complete every required item, and each student receives it once.

Review students and issue: completion, final grade, what is missing, the certificate already issued, and the assessment history link. Only students who completed the class can be selected.

Gradebook

What are the grades of all students in my class? Every published assessment of the class, each student's final grade and their completion of the required class work. Only your own classes are shown; practice and public challenges are not part of the grade.

Class
Python Fundamentals, BSDS 1A

Assessment details
All assessments (grid)
Open

Python Fundamentals, BSDS 1A
5 students, 3 assessments

Each cell shows the counted attempt (the best graded attempt), its percentage and its state. The final grade is the average of a student's graded assessments, each counting equally. Completion counts every module, activity and assessment assigned to the class (7 items); an assessment counts once it is graded. Pass marks use each assessment's passing score, or 70% when none is set. Choose an assessment above for its feedback, or a student for their whole record.

Certificate of Completion: Python Fundamentals Completion Certificate (Active). At the end of the semester, issue it there to the students who completed the class.

Student	Python Fundamentals Homework, due Sep 10, 2026	Variables and Data Types Quiz, due Sep 15, 2026	Midterm Examination Examination, due Sep 28, 2026	Final grade ?	Completion ?
Ana Villanueva ana.villanueva@test.local	75% 15 / 20, feedback given	80% 16 / 20	Missing	77.5%	6 of 7
Bea Santiago bea.santiago@test.local	85% 17 / 20, feedback given	90% 18 / 20	88% 22 / 25	87.7%	5 of 7
Lea Cruz lea.cruz@test.local	90% 18 / 20, feedback given	85% 17 / 20	92% 23 / 25	89%	Completed
Marco Dela Rosa marco.dela.rosa@test.local	95% 19 / 20, feedback given	90% 18 / 20	96% 24 / 25	93.7%	Completed
Paolo Reyes paulo.reyes@test.local	60% 12 / 20, feedback given	Missing	Missing	60%	2 of 7
Average / Total	81%	86.3%	92%	81.6%	2 of 5 completed

Instructor Gradebook (Dark): students x assessments, Final grade, Completion, and the Average / Total row.

Paolo Reyes

Python Fundamentals, BSDS 1A, 1st Semester 2026-2027

← Back to the Python Fundamentals grid

Final grade ?

60% (12 / 20 points), 1 of 3 assessments graded, in progress

Class completion ?

2 of 7 required items completed (modules 1 of 2, activities 0 of 2, assessments graded 1 of 3)

- Conditional Statements (Version 1) (Module): Not started
- Loops Practice Quiz (MCQ challenge): Not attempted
- String Methods Coding (Coding challenge): Not started
- Variables and Data Types (Quiz): Not turned in
- Midterm Examination (Examination): Not turned in

Certificate of Completion

Not issued.

Assessment	Type	Due	Counted result	Status	Every attempt	Feedback
Python Fundamentals	Homework	Sep 10, 2026	12 / 20 60%, not passed	Graded	Attempt 1: Graded, 60%, Sep 09, 2026, 10:30 AM	Good use of variables. Check your loop bounds.

Class completion: all required work completed

Modules 2 of 2, activities 2 of 2, assessments graded 3 of 3. Certificate of Completion issued on Oct 1, 2026: [view it](#).

The student gradebook on a phone.

The five layouts as PDF output.

Commands (Windows, XAMPP)

Step	Command or action
1. Unzip over C:\xampp\htdocs\ so the DataSensei folder merges (do not apply the earlier Updates 13 ZIP).	—
2. Apply the migration.	<code>php artisan migrate</code>
3. Clear cached views, routes and configuration.	<code>php artisan optimize:clear</code>
4. Optional: issue Core certificates learners already earned.	<code>php artisan datasensei:core-sync --award</code>
5. Optional cleanup: the old At-Risk view, unused since Updates 12.	<code>if exist resources\views\instructor\risk\index.blade.php del resources\views\instructor\risk\index.blade.php</code>
6. For logos on certificates, enable PHP's GD extension (extension=gd in C:\xampp\php\php.ini) and restart Apache. Without it, the issuer's initials are shown.	—

Verification

Check	Result
PHPUnit, full suite	1656 passed, 13356 assertions, 34 skipped (the Docker-only sandbox tests), 0 failed
New and updated tests	Updates13CertificateBuilderTest (10): no module field and the live preview; issuing only to students who completed the class, once; server-side checks of every field; other instructors get 404; editing returns to draft and never changes issued certificates; completion rules; My Certificates, PDF and verification; revoke and reissue; settings, logo and layouts; Dark / Light. Updates13GradebookTest (4): final grade, averages, completion, student record, student gradebook columns and overall grade. Updates13EndToEndSimulationTest (2): the Part 3 simulation with the class certificate, and no duplicate routes, menus or tables. Updates12GradebookPrivacyTest: one assertion moved to the new overall-grade row.
Browser run	Login, layout choice, live preview while typing (including an unknown placeholder), save, activate, select and issue (2 of 5 students eligible), both gradebooks and the student record, in Dark and Light and at phone width; no script errors.
Migration	Fresh install, and a second run on an already migrated database: no change. MySQL 5.5 rules kept (no JSON, no foreign keys, short indexed strings).
Blade templates	All compile (php artisan view:cache).

Not verified here: a MySQL 5.5 server itself and XAMPP on Windows.

Files in the ZIP

Every file added or changed since your current codebase (Updates 12 with the opened_at fix), folder structure kept. Nothing needs deleting except the optional cleanup in step 5.
